GALIETTE MITA

(646) 702-3459 | gm3258@columbia.edu | github.com/galiettemita | https://galiette-portfolio.vercel.app/

EDUCATION

COLUMBIA UNIVERSITY ENGINEERING **New York, NY**
B.S. in Computer Science, Jeffrey and Linda Franklin Scholar Expected Graduation: May 2029
Relevant Coursework: Data Structures & Algorithms, Advanced Programming in C/Unix, Probability for Engineers, Linear Algebra, Software Quality and Design

TECHNICAL PROJECTS & COMPETITIONS

APPLYLOG — AWS SERVERLESS INTERNSHIP TRACKER October 2026
- Built and deployed a private serverless internship tracker with React/TypeScript, AWS Amplify Gen 2, Cognito, AppSync, GraphQL, and DynamoDB; implemented authenticated CRUD, owner-based data isolation, input validation, automated tests, and CI/CD checks.

PERSONAL AI AGENT December 2025–Present
- Building a personalized AI agent with MCP, browser automation, and external APIs to execute multi-step workflows across email, scheduling, and web research with explicit user approval.
- Designing persistent task state, permission boundaries, and human handoffs so the agent can recover from failures instead of hiding partial work.

SIMON SAYS — AI APPRENTICE (HACKATHON PROJECT) October 2026
- Built an AI apprentice MVP that observes employee workflows, actively asks questions about the reasoning behind decisions, and turns that knowledge into a step-by-step training course for a business's new hires.
- Worked across system architecture, UI/UX, and product scope to ship a coherent MVP under a hackathon deadline.

BIOMEDICAL ENGINEERING — MEDICAL IMAGING September 2025–December 2025
- Developed a U-Net semantic-segmentation model to identify individual cell bodies in microscopy images under Columbia BME Professor Andrew Laine.

JERUSALEM SCIENCE CONTEST, 5th Place National Winner September 2023–June 2025
- Authored papers on AI-assisted covert-speech translation and nanoparticle effects on enzyme inhibition.

AI & COMPUTER VISION PROJECTS September 2022–December 2023
- Trained a CNN to detect pneumonia in chest X-ray images with 85% accuracy, earning 2nd place in the Congressional App Challenge.

Technical Skills: Python, Java, TypeScript/JavaScript, React/Next.js, AWS Amplify Gen 2, Cognito, AppSync, DynamoDB, GraphQL/REST APIs, PostgreSQL, Supabase, TensorFlow, OpenCV, Git/GitHub, CI/CD

WORK EXPERIENCE

COLUMBIA UNIVERSITY HISTORY LAB **New York, NY**
Research Intern — LLM Evaluation September 2026–Present
- Designing an LLM evaluation dashboard and scoring pipeline to compare predictions against redacted ground truth using topic relevance and detail accuracy rather than literal string matching.
- Building a document-ingestion and side-by-side review interface that flags missing or invented content and makes model failures easier to inspect.

FREELANCE SOFTWARE ENGINEER **New York, NY**
Software Engineer March 2025–Present
- **ClassMaker:** Built a constraint-based placement platform for ~1,000 students, enforcing class capacity, friend placement, teacher restrictions, support-hour caps, and balanced class composition.
- Built Student-ID-based spreadsheet ingestion that merges updates across 9 grades and 55 classrooms without creating duplicate records.
- **Mobile Pros: Build and operate a production B2B auction and live-inventory platform in Next.js/Supabase serving 50+ buyers and $100,000+ in inventory.**
- Designed PostgreSQL-backed workflows for pricing, status transitions, notifications, and bidding to reduce repetitive staff work and speed inventory operations.

STUDENT-LED STARTUP (OWNLY NETWORK) **Columbia University, NY**
Software Engineer Intern December 2025–May 2026
- Integrated AI features into a Nostr-based social platform using decentralized event metadata; prototyped privacy-preserving data flows with zero-knowledge proof techniques.

TECHNICAL LEADERSHIP

CUB – COLUMBIA AI CLUB **Columbia University, NY**
Vice President, Research & Projects September 2026–Present
