

GALIETTE MITA

(646) 702-3459 | gm3258@columbia.edu | github.com/galiettemita

EDUCATION

COLUMBIA UNIVERSITY ENGINEERING

New York, NY

B.S. in Computer Science, Jeffrey and Linda Franklin Scholar

Expected Graduation: May 2029

Relevant Coursework: Data Structures & Algorithms, Advanced Programming in C/Unix, Probability for Engineers, Linear Algebra, Software Quality and Design

TECHNICAL PROJECTS & COMPETITIONS

DEVICECHECK - CROSS-PLATFORM DIAGNOSTICS

September 2026-Present

- Designing a desktop app in Rust/Tauri and React/TypeScript to test used iPhones, iPads, Android devices, and MacBooks, check battery and security status, and record results.

PERSONAL AI AGENT

December 2025-Present

- Building a personalized AI agent with Model Context Protocol (MCP), browser automation, and external APIs to carry out multi-step tasks including email, reservations, and web-data retrieval.
- Designing a secure agent-execution architecture with an iMessage-style interface for nontechnical users.

BIOMEDICAL ENGINEERING - MEDICAL IMAGING

September 2025-December 2025

- Developed a U-Net semantic-segmentation model to identify individual cell bodies in microscopy images under Columbia BME Professor Andrew Laine.

JERUSALEM SCIENCE CONTEST, 5th Place National Winner

September 2023-June 2025

- Authored papers on AI-assisted covert-speech translation and nanoparticle effects on enzyme inhibition.

AI & COMPUTER VISION PROJECTS

September 2022-December 2023

- Trained a CNN to detect pneumonia in chest X-ray images with 85% accuracy, earning 2nd place in the Congressional App Challenge.

Technical Skills: Python, Java, TypeScript/JavaScript, TensorFlow, OpenCV, Flask, Next.js/React, PostgreSQL, Supabase, Vercel, REST APIs, MCP, Git/GitHub

WORK EXPERIENCE

COLUMBIA UNIVERSITY HISTORY LAB

New York, NY

Research Intern - LLM Evaluation

September 2026-Present

- Building a dashboard for Professor Matthew Connelly's lab to study how well commercial LLMs predict text hidden by redactions.
- Designing an interface to upload redacted documents and compare model predictions side by side against known text, showing similarity scores and highlighting missing or invented content.

FREELANCE SOFTWARE ENGINEER

New York, NY

Software Engineer

March 2025-Present

- ClassMaker: Built a constraint-based placement platform for ~1,000 students, enforcing class capacity, friend placement, teacher restrictions, support-hour caps, and balanced class composition.
- Implemented Student-ID-based spreadsheet ingestion to merge new placement data across 9 grades and 55 classrooms without creating duplicate student records.
- Mobile Pros: Build and maintain a production B2B auction/live-inventory platform in Next.js/Supabase serving 50+ buyers and \$100,000+ in inventory.
- Automated pricing, status transitions, notifications, and closeout across auction and buyer workflows to reduce repetitive staff work and accelerate inventory management.
- Teacher Onboarding Portal: Built a staff portal for document uploads, approvals, renewals, and reminders, cutting the process from weeks to days and reducing the need to search through emails.

STUDENT-LED STARTUP (OWNLY NETWORK)

Columbia University, NY

Software Engineer Intern

December 2025-May 2026

- Integrated AI features into a Nostr-based social platform using decentralized event metadata; prototyped privacy-preserving metadata flows using zero-knowledge proof techniques.

TECHNICAL LEADERSHIP

CUB - COLUMBIA AI CLUB

Columbia University, NY

Vice President, Research & Projects

September 2026-Present
